Mount'n Mover

by BlueSky Designs

Mary Kay Walch COTA, Director of Sales and Marketing BlueSky Designs Minneapolis, MN

Objectives:

- List 5 benefits and medical justifications for a movable mounting and positioning system
- Identify 3 ways using a movable mounting system impacts functional and psych-social well being
- List 3 types of device mounting/positioning alternatives and a feature consideration for each

As the use of mobile technology grows...so does the need for mounting!

- Assistive technology keeps evolving
- Mainstream technology e.g. Microsoft Windows 10 includes built-in eye tracking support good for eye gaze communicators
- More affordable to obtain
- Download apps
- Communication options expanded, not just traditional modalities but also texting, instant messaging, e-mail, and social media
- Multiple devices: phone, laptop, tablet, iPad

Essential Life Skill

Ability to access that technology has become an essential life skill for interacting with the world!

- Communication
- Functional Activities: eating, reading, writing
- Safety access to call for help at all times
- Vocational, academics and work
- Hobbies and recreation
- Minimize individual's dependence on others
- Improve quality of life

Optimizing Device Positioning

"Optimal" varies (consider the whole picture)

- From person to person
- Their needs and specific considerations
- Impacts access, mobility, health, independence

Holistic approach

- Accommodate different devices and activities
- Multiple devices (concurrent access)
- Different operating positions
- Across environments (bed, w/c, table, work)

Types of Mounts

Simple: Basic support, static

Added Features: Movable, locking

High Tech: Powered

Movable Mounts

NEW!

Unique mechanisms allow users to independently manipulate the attached device with great ease and flexibility.

Static vs. Movable

Static Mount

- Impede transfers
- Obstructs vision
- Single operating position
- Most can not be moved independently

Movable Mount Consider if you want...

- Move independently
- Set multiple lock positions, changes with ability
- Safety visual or physical access, reduce tipping hazard
- Use multiple devices

Do more - with a mount that moves!!!!

NEW! Simple Mounts

Quick Connect

Speech devices, Compatible with other mounts

Small Tray 3.75" x 7"

Phones, remotes, small devices

Large Tray 11.4" x 9"

Medium devices, eating, writing and reading

New Simple Mounts Quick Connect

Quick Connect Plate

All Swivel

Lay Horizontal

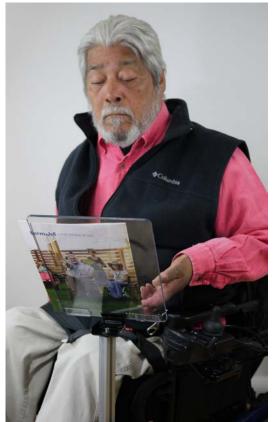

Large tray has off-set option to adjust depth

Vertical Tilt

Folds Down flat for Storage (trays)

Customizable Support Edges for Trays

Bottom placement

Bottom and side placement

Attach 2 edges make channel

Double Decker

Two mounts

Dual Arm with locks holds Laptop

Simple Mount with Large Tray holds mouse or phone and offers an arm rest when fatigued.

"I can now access my laptop everywhere – not just my office" -Cindy

Mount'n Mover Options

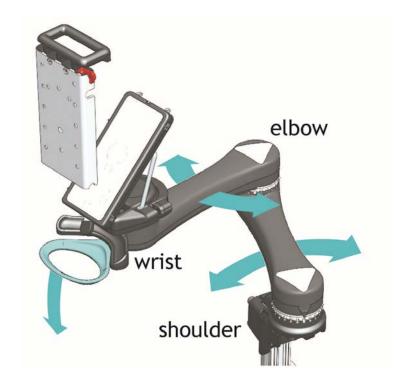

Single Arm

Now black! Silver original.

Moving The Arm

- 1. Press hoop. Unlocks both shoulder and elbow.
- 2. Move both arms at once. Use hoop to steer.
- Let up on the hoop. Continue moving arms to find a memory lock position.

Rotate The Wrist

- 1. Press PADDLE to unlock wrist. Wrist is momentarily unlocked at that position.
- 2. Move it! Wrist will remain unlocked until it finds memory lock position.

One-handed operation!

Adjust The Tilt

- 1. Unlock: move tilt lever to the right.
- 2. Adjust tilt angle: push down or pull up on the device.
- 3. Lock: move tilt lever to the left.

High or Low resistance hinge available.

High resistance hinge recommended for large devices 5 pounds or heavier.

Slight forward tilt for eye gaze access

Customize Lock Positions

To set one **or more** lock positions, push lock setter(s) down.
Up to unlock*.

*Setters can only flip up when NOT locked in position

Quick Release Plate (QRP)

The QRP is needed to attach a device or tray to the Mount'n Mover.

The QRP makes attaching or swapping out devices a snap!

New Easy Mover

- Movable joints
- Adjustable low to high resistance
- New Quick Connect Receiver compatible with other mounts and devices
- Available with locking and non-locking tilt plate

Easy Mover Tilt'n Turner

Quick Connect Plate Locking or Non-Locking

Quick Connect Plate

Table Mounts

Stand +90

Where to Mount

Wheelchair

Standers

Strollers

Where to Mount

Access ALL Day = Increased Communication

School added mounts for AAC to:

- Gait Trainers
- Adapted classroom chairs
- High/low standers
- Beds and more!

Noticed constant access to devices led to increase in communication

"No more sabotaged "speech sessions" and set up time significantly decreased"

~Julie OT

Wheelchair Tray

One Mount - Many Uses

Wheelchair, bed, walker, stander, table and floor stand!

What to Mount

Communication Devices

Mobile Devices

Camera

Other

Device & Tray Attachment Options

iTab Tray

12" x 12" Tray

Universal Rotator

Stand +90

Camera

Laptop Tray

Tray with Lip

Phone

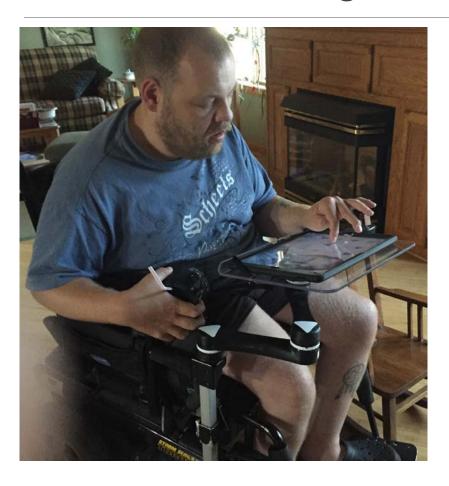

Tablet & Keyboard

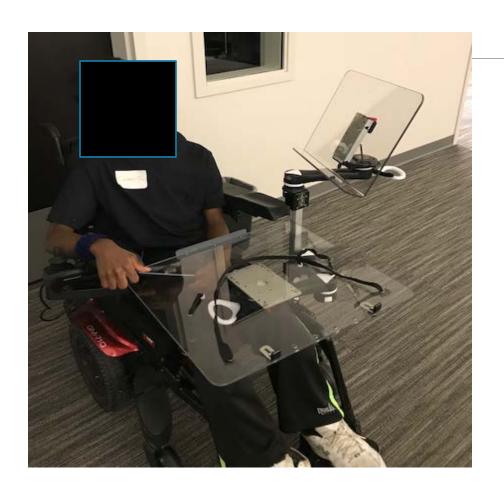

Device Plates

Custom Trays Available

Custom Large Tray

Can be independently moved by the User

Reduces dependency on caregivers

Increased independence in performing functional skills like eating, writing and communicating

Provides access to device in case of an emergency

FREEDOM!

Independence Communication

Greta places her order at the restaurant independently

Allows for a Variety of Adjustments

Does it allow for a variety of adjustments to accommodate for change in positioning, growth, fatigue, or environment?

Mount Tilts & Moves With the Chair

Move For Visual Access

Rotates for visual access when driving!

Access device when standing!

Access Beyond the Chair

Swing mount around to still access device from chair or bed.

Can eliminate need for additional bed or table mount!

Double Decker Multipurpose

Easily swap out devices or trays!

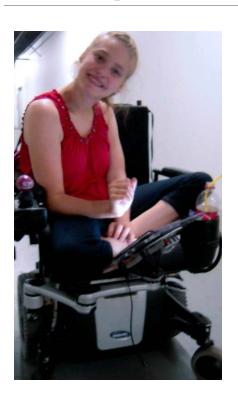

Operating Positions Adjustability

Attached to power chair
Allows camera to get close to eye
Rotation and tilt

Unique Operating Position

Ergonomics

Varies per person's needs

Access to iPad

Mount is below seat level Stabilizes arm on leg Angled for access (Vis/Phys)

Access to computer table

Needs to move it to the side Elevates herself to work on her computer

Unique Operating Position

iPad mounted at seat level provided ability to stabilized arm for direct select access

Therapeutic Benefits Improve Posture

Neck pain reduced immensely after just one week with elevated.

BEL13VE in Miracles Foundation Jack Jablonwski

Therapeutic Benefits Improve Posture

Positioning iPad at eye level improved posture

Access Method Eye Gaze or Head Tracker

Eye Gaze Optimal Positioning

- Positioning is critical
- Easy calibration
- Need consistent placement of device
- As position changes throughout the day - so must the mount
- Tilt and rotation
- Easy for caregivers multiple locked positions
- Moves from chair to bed, table, wall or floor stand

Universal Rotator

Rotates

- Communication device for head tilt and side-lying for eye gaze access
- iPads from landscape to portrait and back

Stand +90

Positioning is critical

Consistent placement of device is essential

Stand+90 and Universal Rotator

Sophia needed to use eye gaze for access to her communication device while in bed and in her chair

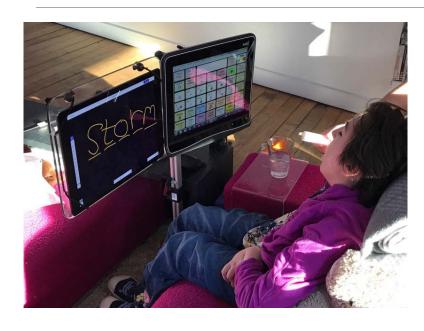

Solution: Floor Stand, Dual Arm, Stand +90 with

Universal Rotator

Easy Mover - Eye Gaze

Searches information on her iPad, then talks about them using her speech device

Eye Gaze

At home and school!

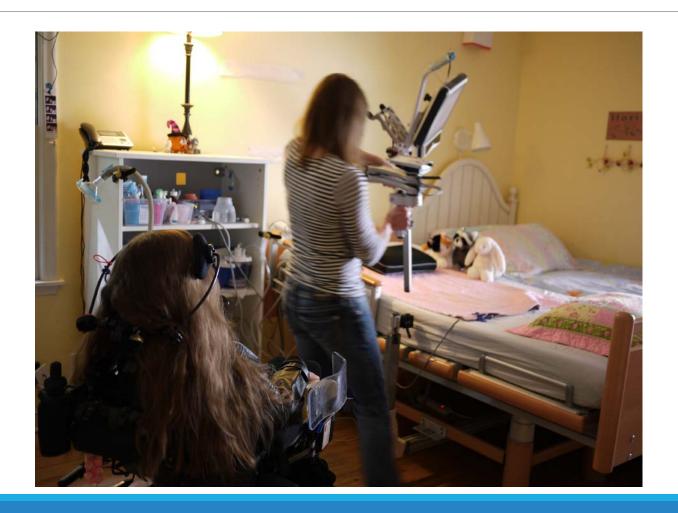

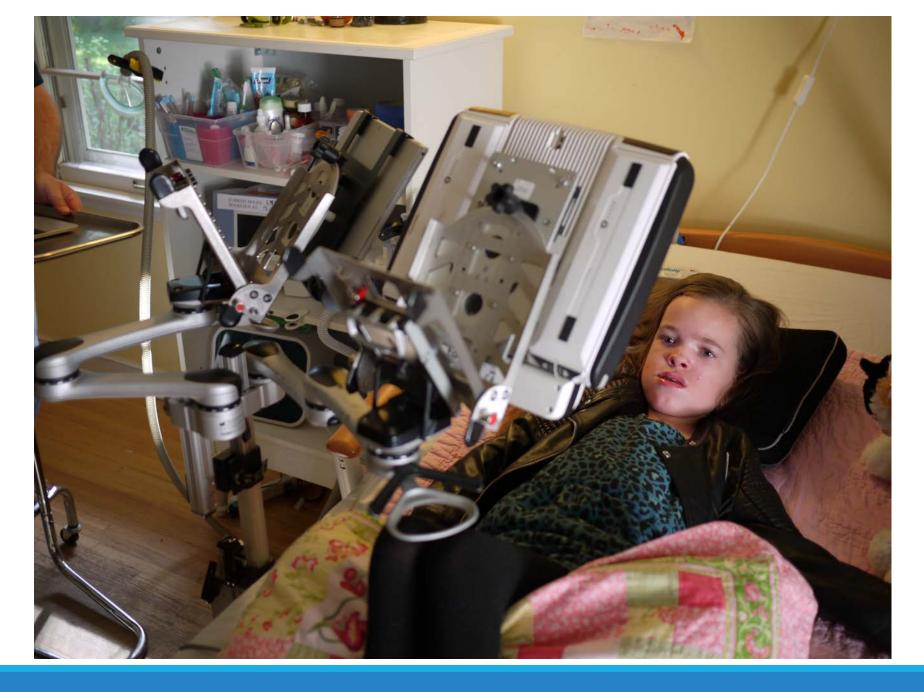

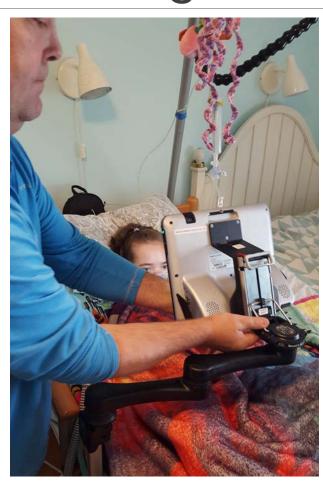

Move from Chair to Bed

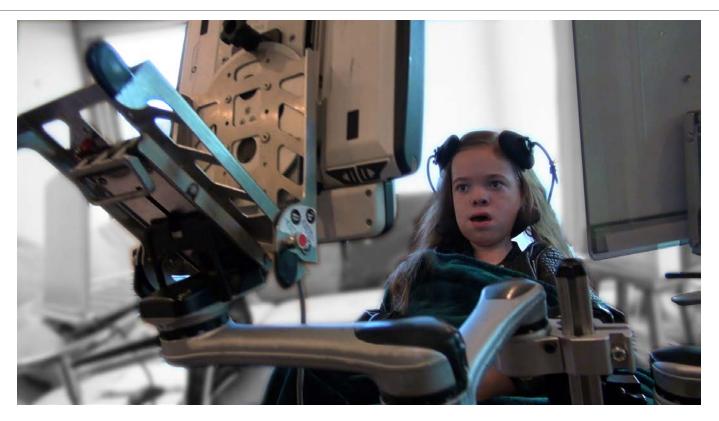

Update - Easy Mover with Locking Tilt Plate

Video: Sophia and Her Mount'n Mover

https://www.youtube.com/watch?v=AGJK80 8jvM&feature=youtu.be

Eye Gaze Access

At the dinner table

Mount'n Tilter

At school tables

- Table clamp
- Mount'n Tilter

On the floor

- Standing
- In low position

Functional Needs Music Class

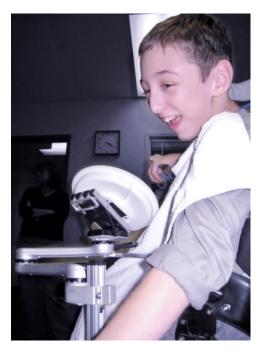

Trumpet is mounted to support weight and raise into position

Functional Needs Eating

With optimal positioning of his plate, Jordan can feed himself for the first time!

Functional Needs Think Outside the Box!

Universal Access Station Kit

- Cafeteria, library
- Therapy room
- Evaluations Centers

Evaluation Tool

- Mount can allow for ease adjustments and is customizable for evaluations
- Ability to be quickly attached to a variety of surfaces, easily moved, and provide a stable set up for evaluations
- Consider using it during therapy sessions for working on range of motion, posture and visual access or testing

Evaluation Kits

Device Plate Attachment Set

Eval Kit includes Case

Table Eval Kit

Grows with Client to Meet Changing Needs

Tools for life!

ALS - Mount Changes as Abilities Change

Gae - first mount user!

- Positioning reduces fatigue
- Transfer and use the toilet
- Reboots device, adjusts for glare
- Visual access for driving, TV
- Access to tables and sink
- Moves to exercise her legs
- Moves to side for photos

New Single Joint Pow!r

Tilt device – prevent glare, drive

Move to the side to transfer

Move close for visual or physical access

Increase independence

New Pow!r Mount Shoulder Hybrid System

Mount'n Mover with Pow!r Shoulder

Single or Dual switch control

Three modes of control:

- Alternate directions with one switch
- One switch for each direction
- Go to customizable target positions with one switch

Brea

New Pow!r Mount Tilt Hybrid System

Mount'n Mover with Pow!r Tilt

Single or Dual switch control

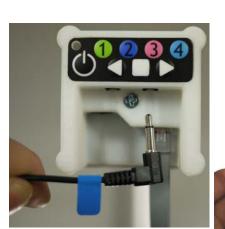

Three modes of control:

- Alternate directions with one switch
- One switch for each direction
- Go to customizable target positions with one switch

Direct, Single or Dual Switch Access

End Cap: access, switches, power, and control

Built-in keypad

No app required for Single joints/Hybrids

Switches plug into End Cap

Switch 1: Toggles direction

Switch 2: Goes to 2 Target

positions

Two switches: Directional

Power options

Built-in 12v lead acid battery

Wheelchair battery

AC-DC converter/power supply

Case Study: Scott

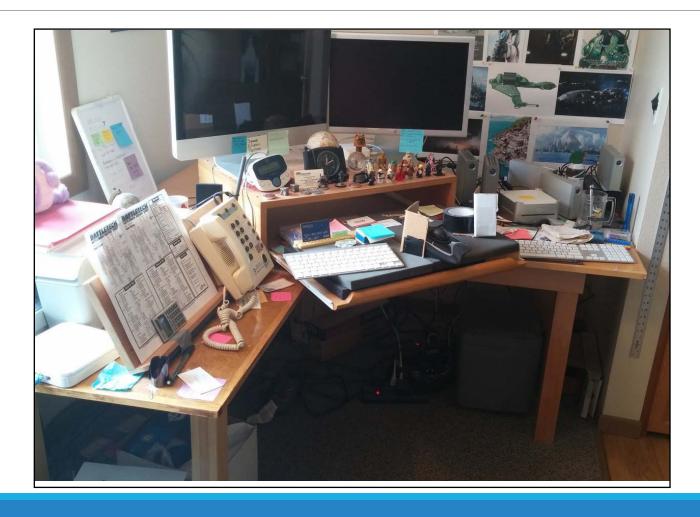

Mayo clinicians and BlueSky Designs

Overview

- Tetraparesis due to SMA
- Lives alone in the community
- Enjoys playing games, watching movies and socializing with friends on the computer
- Need for power mount:
 - Create opportunity to self suction oral secretions while home alone

Scott's Computer Workstation

Challenges

Limited care time - set up at desk in power wheelchair

Decrease risk for aspiration pneumonia, choking and respiratory infections

Thumb and Index finger flexion, extension, minimal pronation/supination on right hand, slight pronation on left hand

Using voice increased saliva, gurgle sound

Solution: Independent Suctioning via a Hybrid Mount with Power Shoulder

Power shoulder joint

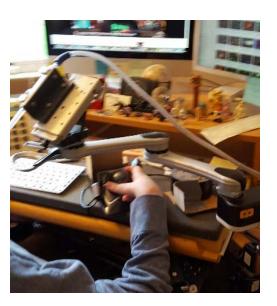

Brings yankauer into position with thumb and MicroLite switch

Actuates suction with index finger and 2nd switch

Attaches tube to plate with PVC angle and clips

Final Setup

Kensington Expert Trackball
MicroLite Switches (2)
PowerLink 2
Hybrid Mount with Power Shoulder
Yankauer

Scott: Case Study Outcomes

Quantitative

Decrease in frequency of respiratory illness

Qualitative

- Patient-Specific Functional Scale
 - Score increased from 0 to 10 with self suctioning independence
- Decreased anxiety
 - "I would limit what I would do because I had a feeling of drowning"
- Increased engagement with friends
 - "I actually talk to people a lot on the computer and now I can talk the whole time...my voice doesn't get gurgly"

Future Developments Pow!r Mount Multiple Joints

Control options:

- Switches
- Touch display
- Accessible app
 - Easy and efficient (target positions)
 - Independence (adjust individual joints)
 - Customizable (change devices, controls, preferences, different configurations)
 - Android and iOS
 - Touch with finger or stylus tip
 - Switches: Timed scan or Step scan

Pow!r Mount App's Main Screens

Targets—to quickly move to favorite positions

Adjust—to make adjustments to individual joints

Groups—Sets of targets for devices or environments

TARGETS

ADJUST

GROUPS

SETTINGS

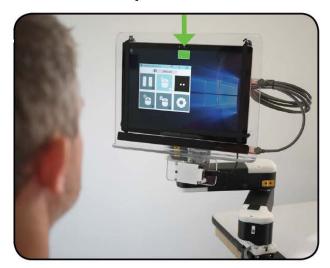

Future Developments Auto Repositioning

A mount that Auto-Repositions a speech device!

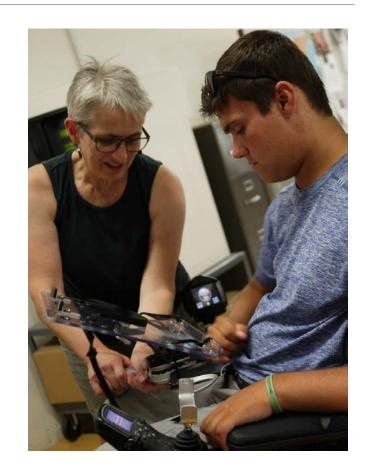

Out of position (not calibrated)

Pow!r Mount repositions (calibrated)

Assessment Questions

- Does it allow for daily adjustments for change in positioning, growth, fatigue, environment?
- Can the mount be used independently by the user?
- Does the mount allow access to a variety of items?
- Can it provide multiple operating positions without the use of tools?

Assessment Questions Continued

- Does it enable independent access to a communication device in all situations and environments at all times?
- Can the device be moved out of the way rather than removed entirely risking damage and loss?
- Does the mount provide consistent positioning for specific locations?
- Can it be moved from chair to bed thus eliminating the need for 2 mounts?
- Does it help caregivers set up device?

Medical Justifications

Need to access from a tilted position

Improved visual access for driving

Positioning for access from more than one position (direct and eye gaze)

Able to quickly move the device

Hygiene: able to use a sink and toilet

Positioning changes, so device must change

Must adapt as abilities change (ALS, MD...)

Safety - keep chair from tipping

See: <u>www.mountnmover.com/evaluate-buy/funding/</u>

Letter of Necessity

- Provides independence through positioning and ease of use
- Allows for appropriate communication device position while the chair is tilted
- provides (name) continuous access to their communication device in the event of an emergency
- Decreases tipping hazard
- Improved visual access for driving/wheeling
- Customized lock positions avoids caregiver guessing and frustration
- Provides access to technology/communication 24/7 in case of emergency

Health Benefits

Optimal Positioning and Access Provides:

- Ability to exercise without restrictions
- Improved range of motion & fine motor dexterity
- Improved access to sink and toilet (hygiene)
- Improved ability to eat (up to a table or positioning of tray)
- Improved ergonomics; less pain
- Ability to change positioning based on the activity
- Better head control due to device positioning (height & tilt)
- Less fatigue

Psychosocial Benefits Of A Moveable Mount Reported

Study by Ithaca College OT Department

PIADS: How are you affected by the Mount'n Mover? Adam Kinney, MS and Lynn Gitlow, PhD, OTR/L, ATP

"A Consumer-Centered Approach to Evaluating Assistive Technology Usability Outcomes"

June 2015 issue of American Occupational Therapy Association Special Interest Section on Technology.

Increase: Decrease:

Competence Frustration

Adaptability Embarrassment

Self esteem Confusion

Impacted more than device access, unrelated tasks were easier to perform. Tasks included: transferring, answering calls, socializing, feeding, shopping, and adaptive baseball.

Mounting Solutions for Simple to Complex Mounting Needs

It's essential for a person's physical and psychological well being to be able to readily and independently access food, drinks, technology and other items in their environment. People need access to their phones, iPads, tablets, cameras, speech devices and trays to make this possible. Positioning and securing these ever-evolving items for access can be a challenge for people with major and even minor mobility limitations. Mounting systems help stabilize and position devices for optimal access on wheelchairs, tables, beds and floor stands through every stage of a condition or disease over a lifetime. With the wide variety of mounting options available, it's important to be familiar with feature considerations to determine the best mounting recommendation possible and address the access needs of individuals with disabilities and their caregivers.

Due to the progressive nature of some diseases like ALS, MS, SMA and MD, it becomes important to maintain a client's ability to access technology and initiate control as the disease progresses and motor skills decline. This typically results in an increase in use of technology to address communication and environmental control needs. Adding to the challenge, access methods, technology and positioning need to adapt to keep up with the changes in physical abilities. They may start with simple systems and need to move to more complex systems as their needs change. This becomes increasingly important when using speech devices and mobile devices to communicate via speech, email, etc. Many people with disabilities are effectively using these devices to access social media and other programs to connect with their support networks, build relationships and stay productive and safe. Providing an effective mounting solution

is critical for success.

There are many mounting solutions on the market. Fixed, single-position mounts do not offer the end user the independence of moving his/her own device to a different position without help from another person. Movable mounts offer an alternative to stationary mounts and trays and provide benefits that go beyond access to the device for both the client and the professional. Family members and caretakers appreciate the safe, quick and easy repositioning of devices for transferring, eating, toileting, changing devices and pulling up to tables or sinks.

Individuals with limited use of their upper extremities can move their device to a position that facilitates independence performance. Individuals using a movable mounting system experienced functional gains and psychosocial benefits resulting from increases in their independence and self-esteem (Kinney, Gitlow, Goodwin, 2014). It's recommended to review the advantages and limitations of mounting devices. Identify mounting needs and take a holistic approach considering the person, their goals, activities, devices and the environment in which it's used. Off-the-shelf mounts cost less, but may not hold position under the weight of the device and user's touch, especially if they have high muscle tone.

Mount'n Mover movable systems offer unique features specifically designed to promote independence and access. Making it possible to mount mobile devices, speech devices, and trays on wheelchairs, tables, beds and floor stands.

MARY KAY WALCH, COTA, Director of Sales and Marketing at BlueSky Designs, has worked in the assistive technology industry for more than 30 years. Improving product design and life for individuals with disabilities. Her specialty is accessibility and independence with optimal positioning and stability through mounting solutions.
